Student ID	22016380910	Program	B.Sc Computer Science

Proposed Title	Design and Implementation of a Web-Based Student Attendance Management System
Area of Investigation	The capstone project will look into how the design and implementation of a web-based student attendance management system can enhance attendance tracking by automating student registration, attendance recording, and report generation. The system aims to improve accuracy.
Reasons for Choice of Project	1. The proposed capstone project is motivated by the increasing need for an efficient and reliable web-based student attendance management system in educational institutions. Traditional manual methods of recording attendance are often time-consuming, prone to errors, and difficult to manage, especially as student populations continue to grow. This has created the need for an automated system that can enhance accuracy, improve record management, and support timely decision-making.
Importance of the Study	1. This study is significant because it improves the efficiency and accuracy of student attendance management in educational institutions. The web-based system reduces errors associated with manual attendance recording and ensures secure, centralized storage of attendance records. 2. The proposed system benefits lecturers and administrators by saving time, simplifying
Target Users/Beneficiary	1. The primary beneficiaries of the proposed web-based student attendance management system are educational institutions, including schools, colleges, and universities, as the system helps improve the efficiency and accuracy of attendance management. 2. Lecturers and teachers benefit from the system through easy attendance recording, reduced workload, and quick generation of attendance reports. School administrators benefit from centralized access to accurate attendance records, which supports effective monitoring and decision-making. Students also benefit indirectly, as the system ensures fair and transparent attendance tracking and reduces errors associated with manual record-keeping.

Similarity with any Previous Study/Project	1. Omoniyi, A. O., Oladimeji, B. J., & Olojido, J. B. (May 2025) developed a web-based student attendance management system using Visual Basic to automate attendance recording, enhance data accuracy, and simplify report generation. The system provides user authentication,
